High quality fabricated components sourced at lower costs for office furniture systems !!!!

Blue Diamond Technologies, the company that specialises in the global sourcing and supply of high quality components from cost saving manufacturers has now extended its scope to cover a wide range of fabricated metal items. This includes many of the custom parts that are used by manufacturers of office furniture and partitioning systems, examples of which may be feet for screens and partitions, shelf holders and screw clamps.

All too often, manufacturers will devote considerable resources to the efficient sourcing of aluminium extrusions, glass, veneer and wood, but overlook the smaller engineered components which can also be needed in significant quantities. Now Blue Diamond can supply a wide range of these fabricated metal components to individual specifications at greatly reduced cost.

Blue Diamond is not just a component supplier; its team of specialists may take control of every aspect of the supply chain to provide all the benefits of global

procurement with the reliability and convenience of a single UK source. This comprehensive service includes order scheduling, packaging and stockholding if required.

Blue Diamond also offers a complete design and engineering service to ensure that components are not over engineered and are designed for production by the most cost -efficient methods.

Before manufacture, the engineers at Blue Diamond can evaluate a customer's design and suggest improvements, ie the changing of material specifications or finishes to reduce costs while improving or maintaining functionality. Engineering drawings can be originated or modified and quality standards set to ensure that components will exceed the demands of the application.

Blue Diamond has a wealth of experience in the assembly and supply of a wide range of finished components, which offers further opportunities to reduce cost savings when compared to conventional assembly methods.

In addition to fabricated components, Blue Diamond also supply all types of plastic moulded components, turned parts and castings, all manufactured to the highest standards. These products are being supplied across a wide range of industries including construction, automotive, agriculture, building, office equipment, pumps, electric motors and instrumentation.
